

## **FORM AND DESIGN FEATURES**

LT-20220207-WHJ is a wood vessel hand-shaped and sculpted on a lathe. The body was formed and hollowed-out from a chunk of solid wood harvested from a tree. The form of this vessel is without historical reference to earlier pottery forms, and is thus Modern in form. The visible organic patterns of wood grain are integral to the walls of this wooden vessel. A continuous transition in form occurs between the indented, convex, and concave portions of the handle, stem, and top of the lid. A continuous convex transition in form is maintained between the lid of the vessel and its body. Continuous transitions occur along the wall of the body, as its form changes from convex to concave. An abrupt transition occurs where the vessel wall meets the base.

## **SPECIFICATIONS AND VALUE**

Wood Species Used: Aromatic Red Cedar

Number of Pieces: one

Approximate Weight: 3.2 lbs

Overall Dimensions: 8.5"T x 8.625"DIA

Opening Diameter: 4.375 inches

Production Year: 2022

Original Value: \$380

Current Value: \$388
